

# Accelerate Care Efficiency with Ophthalmic-Specific Workflows

As eye care needs continue to increase, operational efficiency from appointment setting to collection becomes essential.

NextGen® Ophthalmic Suite places eye care at the heart of your clinical documentation and practice management (PM) system—with configurable, ophthalmology-specific content to streamline your workflow.

This content supports numerous ophthalmic-specific workflows. Areas covered include office visits, office procedures, diagnostic testing, pre/post-op care, surgery scheduling, and ambulatory surgery center (ASC).

## Empower your practice with targeted workflows and full integration

Automating the charge review process minimizes manual effort and increases productivity. For example, an increase in efficiency enabled Columbia Eye Clinic in South Carolina to achieve a 72% reduction in A/R days.<sup>1</sup>

Targeted, precise content enhances clinical documentation. Integration fosters strong collaboration for better patient care and improved financial outcomes.

## Full, configurable documentation of a patient's visit

A broad range of ophthalmic-specific templates allows you to seamlessly document your patient's visit. You'll find content for a full spectrum of cases—from conducting a comprehensive eye exam to treating uncontrolled intraocular pressure or a retinal detachment.

## Fully integrated eye care

To achieve more effective patient care, optometrists and ophthalmologists must build stronger professional relationships—whether they are part of the same practice or separate, collaborative organizations. An integrated eye care solution accessible and shared through your EHR supports these close ties.

## Complete integration with all NextGen Healthcare solutions

Your ophthalmic workflow fully integrates with practice management (PM) and NextGen Healthcare solutions, such as NextGen® Optical Management, NextGen® Mobile, NextGen® Financial Analytics, and NextGen® Patient Experience Platform—all solutions designed to help you run your practice. Gain the clinical and financial benefits of an integrated health IT solution for ophthalmology.

## Better financial outcomes

Integration of ophthalmic-specific templates with your PM system allows for more efficient charge capture. Charges are based on your documentation and are sent automatically to the PM system. **With the financial analytics app, you can monitor your practice's financial performance directly on your smartphone.**

## Place eye care at the center of your health IT

Precise ophthalmic data can live in the heart of your EHR and PM system. You can now reap greater benefit from the technology solutions that provide the backbone for running your business.

## Improve efficiency

Streamline clinical workflows with ophthalmic-specific, configurable content—these workflows integrate with eye care management. This means documentation is more precise and the delivery of vision care is more efficient. **To save time, use NextGen Mobile to chart using your smartphone, when and where you want.**

## Exchange data seamlessly

When communicating with external health organizations, you can exchange patient data seamlessly. Ophthalmic-specific patient data can be shared using NextGen Healthcare interoperability solutions. **Take advantage of a national data exchange network and easy-to-activate plug-and-play APIs for painless data exchange.**

## Engage Patients

Empower your patients to participate more fully in their care. Integration with the NextGen Patient Experience Platform gives your practice and your patients access to tools such as a patient portal, patient self-scheduling, online bill pay, precheck, and virtual visits. **Provide an online platform that makes it easy for patients to connect with your practice, communicate with you, and pay bills.**

“It’s refreshing to see NextGen Healthcare continuously updating its workflow content to meet the needs of our evolving specialty. This helps us improve efficiency throughout the practice and maintain a more satisfying work environment for staff and providers.”
